Bulk Diesel Fuel Filter Cart | BDFC

Bulk Diesel Fuel Cart | BDC

Schroeder coalescing units are rated at 99.5% single-pass efficiency and are capable of removing free water and particulate matter down to less than 1 μ m, which means that the fuel supplied to your equipment will achieve or exceed today's stringent OEM injection system specifications.

The **Bulk Diesel Fuel Filter Cart (BDFC)** and the **Bulk Diesel Fuel Cart (BDC)** are capable of handling flows up to 14 gpm and 25 gpm, which makes both products ideal for bulk fuel conditioning.

Features

- New fuel / water separation media technology in a patent pending three-phase element construction for high efficiency, single-pass removal of free-water in Ultra-low Sulfur Diesel (ULSD), biodiesel and biodiesel blends
- Design allows for lower maintenance time and costs using particulate removal pre-filtration for maximum coalescing filter element life
- Helps protect today's Tier 4 engine components against costly failures caused by water contaminated fuel
- Great for kidney loop clean-up of contaminated reservoirs and single-pass bulk fuel transfer
- Pump motor is 115VAC with resettable overload and 7' power cord
