†Double and triple stacking of K-size elements can be replaced by single KK & 27K elements, respectively. Shown above are the elements most commonly used in this housing.

ΔP_{housing}

KFH50 ΔP_{housing} for fluids with sp gr = 0.86:

sp gr = specific gravity
 Sizing of elements should be based on element flow information provided in the Element Selection chart above.

ΔP_{filter} = ΔP_{housing} + ΔP_{element}

The ΔP housing curve labeled "Element Sizing" is the pressure drop between the inlet and outlet areas of the filter's bypass valve and should be used for filter sizing.

ΔP_{element}

ΔP_{element} = flow x element ΔP factor x viscosity factor
