Advanced Fluid Conditioning Solutions®

## Turn-Key Bulk Tank Dispensing Solution | BDF1

- Designed with integrated particulate removal pre-filtration for maximum coalescing filter element life in the down stream housing
- New fuel/water separation media technology in a three-phase element construction for high efficiency, single-pass removal of free-water in Ultra-Low Sulfur Diesel (ULSD) and biodiesel fuels
- Optional, 120 VAC, 235W non-immersion water sump heater, or automatic water drain with 5 or 20 gal remote sump

## Asset Management Filtration Station® | AMFS

- Complete tracking of hydraulic fluid conditions by equipment name
- Provides automatic record-keeping, trending and analysis of fluid cleanliness levels
- Automatically shuts down when the selected ISO cleanliness level is reached
- Ideal for managing multiple equipment assets

## Diesel Fuel Filtration Carts | BDC and BDFC

- Great for kidney loop clean-up of highly contaminated diesel reservoirs and single-pass transfer
- New fuel/water patent pending separation media technology in a three-phase element construction for high efficiency, single-pass removal of free-water in Ultra-Low Sulfur Diesel (ULSD) and biodiesel fuels
- BDC incorporates a bag element pre-filter down to 5 µm for removal of microbial and large particulate contamination

## Telematic Fluid Sampling System | HY-TRAX®

- Provides remote visibility via cellular network to the fluid condition of critical systems
- Fluid particle counts, temperature and water saturation (optional) are displayed on a customizable dashboard, which can be accessed via the Internet
- Pump speed automatically adjusts flow to viscosity conditioning
- Also available in non-telematics version
