Up to 35 gpm

## Schroeder Fuel Coalescing Filters

These units are capable of removing free water and particulate matter from petroleum based fuels including biodiesel and blends. Our coalescing filters are perfect for maintenance of bulk fuel storage tanks, recirculation and kidney loop applications supporting fleet operations.

- Optional sight glass included
- Use upstream (suction side) or downstream (pressure side) of transfer pumps
- Three-phase construction for high efficiency, single pass removal of free water and particulates

When vital & expensive engine components need protection from water contamination, Schroeder Coalescing Fuel Filters are the clear choice.
