As a result of our experience in hydraulic filtration and the various markets that we serve, Schroeder Industries has had the opportunity to adapt some of our standard hydraulic filter models for water filtration. By treating or coating the filter components and using our stainless steel media M-elements, we are able to offer a limited line of filters designed to remove solid contaminant from water. One possible application for this type of water filter is on equipment that uses a water spray system to control dust.

The table below lists the Schroeder filter housings having models available for water service. For WKC50, WLF1, WKF5, and WKFN5, availability is currently limited to the specific model numbers shown. For WKF3, WRLT, WQF5, WQF15, and WQLF15, more combinations are possible and are presented in "box" format. If you do not see the particular model you desire, please contact our Technical Support Specialists.
