

FINAL POLISHING SYSTEMS

Final Polishing Systems

MFS / MFD

The Schroeder Mobile Filtration System is a compact, self-contained filtration system equipped with high efficiency, high capacity elements capable of removing particulate contamination quickly, conveniently and economically. It is perfect for cleaning up existing systems, as well as pre-filtering and transferring fluids.

X Series Filter Skids

Schroeder considers maximum fluid viscosity, (at the minimum operating temperature) in conjunction with flow to properly size the pump and motor.

Standard X Series Skids include a pump, electric motor and either a single or dual K9 or QF15 housing. Many different component combinations provide the flexibility to match specific system viscosity, flow and cleanliness requirements, making the X Series Skids perfect for high flow operations.

*Please see the Filter Systems Catalog for drawings and complete sizing information.
