

Solution

A mobile OEM customer selected our KF3 and MLF1 series filter assemblies for a new application on their Rotary Drill redesign project. A quantity of 4 KF3's and 2 MLF1's are used per drill.

Our products were selected because of their knowledge and experience using our products for several other OEM applications.

The KF3s are mounted external to the hydraulic reservoir and filter multiple return line circuit fluid; the MLF1 units are used to filter return side fluid from two auxiliary circuits.

Customer has ordered the assemblies for use on their first series of prototype drills; estimated sales potential is 240, LF3s and 120, MLF1s through 2008.

Customer	Drilling Manufacturer
Type of Machinery	Rock Blast Drills
Reservoir Capacity	300 Gal
Operating Fluid	Mobil DTE 15
Schroeder Product	KF3 Assembly; MLF1 Assembly, both using our KKZ3 filter elements
